

引入router组件后 只要配置好router-link的路径 就能跳转  
<router-view></router-view>为展示这个路由的位置

```
import Vue from 'vue'
import Router from 'vue-router'
import Rank from 'components/rank/rank'
import Recommend from 'components/Recommend/Recommend'
import Singer from 'components/Singer/Singer'
import Search from 'components/Search/Search'
```

```
Vue.use(Router)
```

```
export default new Router({
  routes: [
    {
      path: '/',
      redirect: '/recommend' 默认页
    },
    {
      path: '/rank',
      component: Rank
    },
    {
      path: '/recommend',
      component: Recommend
    },
    {
      path: '/singer',
      component: Singer
    },
    {
      path: '/search',
      component: Search
    }
  ]
})
```

```
<router-link tag="div" class="tab-item" to="/search">
  <span class="tab-link">搜索</span>
</router-link>
```

// 这个样式为router-link选中的样式

```
&.router-link-active
  .tab-link
    color: $color-theme
    border-bottom: 2px solid $color-theme
```
