在调用vuex中的方法action的时候,用promise实现异步修改

```
const actions = {
    asyncInCrement({ commit }, n) {
        return new Promise(resolve => {
            setTimeout(() => {
                commit(types.TEST_INCREMENT, n);
                resolve();
            },3000)
        })
}
```
