- 1、jsonp原理:
- 1、动态创建script标签;
- 2、把它的src指向服务端地址;
- 3、url中带一个callback (res) 方法,服务端执行这个方法,我们就能拿到这个数据。

手写jsonp:

```
<script>
    function handleResponse(res) {
      console. log(res);
   }
   let p = document.createElement('script');
   p. src = "http://freegeoip.net/json/?callback=handleResponse"
    document.body.append(p)
  </script>
2、jsonp依赖
"dependencies": {
   "babel-runtime": "^6.0.0",
   "fastclick": "1.0.6",
   "vue": "^2.5.2",
   "vue-router": "^3.0.1",
   "jsonp":"0.2.1"
 },
```
