

btn-group-justified端点对齐a可以 input, button要套上group容器

btn-group-vertical横向变成纵向 不加btn-group

<span class="caret"></span>按钮加箭头 input不适用

<div class="btn-group dropup"><!--箭头向上-->

<a href="#" class="btn btn-primary">按钮1<span

class="caret"></span></a>

## 按钮组实例

```
<div class="container">
                        <br />
                        <br />
                        <div class="btn-group btn-group-sm">
                                <button class="btn btn-default active font">
<span class="glyphicon glyphicon-eye-open"></span> Watch <span class="caret">
</span></button>
                                <button class="btn btn-default font"> 3064
</button>
                        </div>
                        <div class="btn-group btn-group-sm">
                                <button class="btn btn-default active font">
<span class="glyphicon glyphicon-star"></span> Unstar </button>
                                <button class="btn btn-default font"> 36296
</button>
                        </div>
                        <div class="btn-group btn-group-sm">
                                <button class="btn btn-default active font">
<span class="glyphicon glyphicon-pushpin"></span> Fork /button>
                                <button class="btn btn-default font"> 9258
</button>
                        </div>
                </div>
```
