## yield表达式:

### yield表达式没有返回值

```
function * gen() {
    let val;
    val = yield 1;
    console.log(val);
}
let g = gen();
g.next() " "
g.next() undefined
```

#### next()返回值:

#### console.log(g.next());

```
▼{value: undefined, done: false} done: false
value: undefined
▶ __proto__: Object
```

# Generator函数内星号 \* 表示嵌套Generator

## next()的返回值

done:是否执行完成

value:yield后的表达式的值(**没有星号 \*** ),yield后的可遍历对象的第几项的值(**有星 号 \*** )

# next()传参:

#### next(10)参数控制yield的返回值

```
function * gen() {
    let val = 1;
    console. log(val); 1
    val = yield [1, 2, 4, 6];
    console. log(val); 20
}
let g = gen();
console. log(g. next(10));
console. log(g. next(20));
```

## 提前结束:

1、g. return(100) 返回值为参数100

```
console.log(g.next())
console.log(g.next())
console.log(g.next())
console.log(g.next())
g.throw(new Error('ss'))
console.log(g.next())
```
