```
function gen(time){
    return new Promise((resolve,reject)=>{
        setTimeout(() => {
            if(time<500){
                reject(time)
            }else{
                resolve(time)
            }
        }, time);
    })
}
gen(Math.random()*1000).then((val)=>{
    console.log('resolve',val);
}).catch((err)=>{
    console.log('reject',err);
}).finally((res)=>{
    console.log('finally',res);
})
```
finally无论如何都会执行的，

then,catch,finally其实就相当于平时调接口的时候的
success,fail,complete
